## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Warman.

The patent by Warman (4,167,159) shows a blow off valve assembly (70) with a valve body. The blow-off valve is disposed in the valve body and is configured to control coolant flow through an engine based on coolant pressure. An actuator (112) is disposed in the valve body and configured to electro-mechanically activate the valve under certain conditions independent of coolant pressure.

The valve includes a conical end (86) and is configured to extend axially to seal a coolant path of a cooling system.

The valve further comprises a spring connected to another end of the valve and is configured to bias the valve against a seat of the valve body to seal the coolant path.

The actuator includes a plunger (116) connected to the valve body configured to unseat the valve under certain conditions.

Application/Control Number: 10/605,620

Art Unit: 3747

The valve assembly further includes at least one coolant inlet port configured to receive pressurized coolant circulating through a cooling system.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Warman in view of Le Lievre et al.

The patent by Warman shows that the electro-mechanical valve is controlled by the temperature not the speed or load of the engine.

The patent by Le Lievre et al. (6,776,126) shows a coolant control system that controls the coolant based on the temperature and the engine speed or load (Col. 4, lines 45-65).

In view of Le Lievre et al. it would have been obvious to anyone skilled in the art who wanted to efficiently control the coolant circulation to include control means based on engine speed or load.

Claims 8-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Warman in view of Le Lievre et al.

The patents by Warman and Le Lievre et al. do not specifically show that the coolant systems can be used in outboard motors. It is the view of the examiner that the

Art Unit: 3747

application of the engine is an obvious choice of design because no new or unexpected results are achieved.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason Benton whose telephone number is (571) 272-4838. The examiner can normally be reached on flex.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry Yuen can be reached on (571) 272-4856. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
